For sizes not shown on this table, please contact Technical Sales. Available in lengths of 1.50m, 2.00m or as required.

#### **DESIGN**

We can offer a full design service if required to meet individual project specifications. Units are designed to meet the loading requirements needed. We can produce units with low flow channels, end walls, manhole openings, dual cell culverts and many other special elements.

#### ATTENUATION SYSTEMS

We have developed a method of casting our box culverts which incorporates a Dry Weather Flow. This sloping soffit is cast in a single operation with the main Culvert Unit. The attenuation units offer a more robust alternative to a secondary cast and come with end walls, access points and pipe openings.

#### JOINTS

Units utilise a socket and spigot joint connection which can incorporate joint sealants, where required. Information available on request.
